resume@andbrant.com **Andrew Brantley** hi.andbrant.com

Professional Summary

Senior software and platform engineer with 10+ years of experience translating customer needs into practical, high-impact technology. Combines hands-on software development and DevOps expertise with customer-facing pilots, technical leadership, and AI-enabled delivery. Experienced building enterprise applications, cloud platforms, and proofs of concept with Python, JavaScript, TypeScript, Kubernetes/OpenShift, and Azure.

Work Experience

WorxAI - Software Engineer - Contract *March 2026 - June 2026*

- Developed and integrated new Python APIs using Flask and FastAPI within large, established codebases, supported by comprehensive unit, integration, and acceptance testing empowered with AI agents
- Automated and maintained Azure Infrastructure with GitHub Actions and Terraform
- Designed and developed an AI proof of concept that uses Azure Cosmos DB and vector search to match product descriptions with inventory items, optimizing for cost, performance, and implementation effort

IBM – Sr. Platform Engineer, Client Engineering *June 2021-March 2026*

- Partnered with customers and sales teams to design tailored technical pilots that supported $100K–$1M+ engagements
- Led team initiatives to prioritize and delegate tasks based on strategic client impact and the probability of increasing revenue
- Wrote custom API gateway logic in JavaScript useing IBM API connect
- Developed and integrated a distributed application on OpenShift, combining a React frontend, TypeScript middleware for request processing and backend service integration, a containerized SQL database, and self-hosted Git source control
- Orchestrated the deployment of OpenShift, IBM Cloud Paks, and open source technologies to facilitate high-stakes POCs and pilots
- Engineered custom front ends, web servers, and complex integration components to seamlessly align off-the-shelf products with unique customer requirements using React, Node.js, and Python
- Automated software deployment using Terraform, Ansible, and OpenShift build pipelines
- Administered Linux servers hosting Podman containers using Ansible and podman-compose
- Empowered other engineers through mentoring on how to write quality code, navigating and building with Kubernetes, and working in a large corporation

IBM – IT Specialist, Global Solution Center, Coppell, Texas *March 2016-June 2021*

- Distilled abstract architectures into small components that developers can implement as compelling POCs
- Provisioned and maintained scalable public and private cloud apps using VMs, and OpenShift
- Steered a cross-functional team in requirements gathering, prioritization and execution using an agile framework to deliver an internal React/Node.js/MongoDB app for organizing the catalog of existing POCs
- Constructed robust front ends, web servers, and integration components to support enterprise workflows using React, Node.js, and Python

Skills

Cloud:	Linux (server, desktop), OpenShift, Kubernetes, Podman, Docker, Proxmox, QEMU, IBM Cloud, IBM Cloud Paks, Azure
Languages:	JavaScript (TS, Node.js, browser), HTML, CSS, React, Python, Nix, Lua
Technologies:	Git, CouchDB/Cloudant, MongoDB, Cosmos DB, MQTT, Kafka, CI/CD, Agile, vim, IPFS, Nebula (Defined Networking), Pi Agent

Education

University of Texas at Dallas, BS Software Engineering *May 2016*

Achievements

Technical Specialist Certification Expert - IBM and The Open Group *November 12, 2025*
Red Hat Certified Specialist in Containers and Kubernetes *December 9, 2021*
Outstanding Technical Achievement Award *May 16, 2019*
U.S. patent filed (US20230169272A1) *November 2021*
Eagle Scout *March 8, 2012*
